

## Where's the Transfo?

### Peripherals' Power Supply

SKR Residential Steam Humidifiers comes with a choice of kits which include PC board, humidity controller and accessories. The default kit is the Kit-R featuring the HRR100 Room Humidity Controller. On occasion, customers prefer to change the controller to a digital one like the HRO20 for esthetic reasons. However, making this change also requires changing the PC board (note that both of these are included in the Kit-N). This new PC board requires a different power supply, which in turn requires a transformer. Without the transformer, the SKR won't be able to operate properly anymore. Thus, it is highly recommended for anyone switching from a Kit-R SKR to a Kit-N SKR with a HRO20 humidity controller to also purchase a transformer. All other details concerning the different SKR kits and their requirements are specified in the installation brochures available on our [website](#).
